

Protect Your Foundation

Humidity Control for Your Basement or Crawl Space

HEALTH RISKS

Your basement or crawl space's dark, humid environment is perfect for mold, bacteria and virus growth.

DAMAGE

Too much moisture can ruin your home's insulation, wood floors and foundation.

ODOR

Musty smells are an indicator that something is wrong in the home and needs immediate resolution.

Energy Efficient

Expanded Capacity

Easy to Maintain

Help prevent viruses, mold, and bacteria in your home.

The fight starts with a high-capacity Aprilaire dehumidifier.

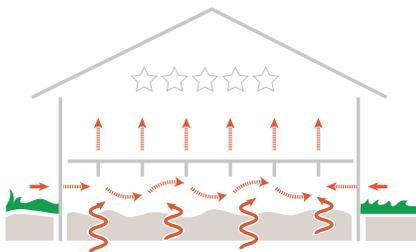

HUMIDITY IN YOUR HOME

Outside relative humidity (RH) can promote mold growth, drastically affecting your home. Typical summer conditions can create high levels of humidity in your basement that cause mold to grow in as little as two days.

HIGH

| BASEMENT & CRAWL SPACE MOLD GROWTH* | | | |
|-------------------------------------|-------------------|----------------|----------------------|
| Crawl space Temp (°F) | Relative Humidity | Dew Point (°F) | Days Til Mold Growth |
| 68° | 85% | 63° | 6 |
| 68° | 90% | 65° | 4 |
| 68° | 95% | 67° | 3 |
| 68° | 100% | 68° | 2 |
