Bed Bugs Are Back

Since the late 90's bed bugs have made a comeback and have returned stronger than ever. Hypotheses for the resurgence include:

- Increased international travel
- Changing pest control methods
- Bed bugs developing an immunity to insecticides

Infestations have been found in high and low-end residential areas, hotels, hospitals, nursing homes, movie theaters, retail stores, airplanes, universities and public schools.

Bed bugs come out for meals at nighttime and feed exclusively on blood. Their bites feel and even look similar to a mosquito bite. Often they are painless and result in small, red, itchy bumps along the body. Some people are unaware that they've been bitten and may not see any bites for days.

Protect-A-Bed's lab tested and industry proven Bed Bug Mattress Encasements prevent bed bugs from:

- ♦ Entering
- ♦ Escaping
- ♦ Biting through

They are:

- ♦ Waterproof
- ♦ Guaranteed 100% pesticide free
- ♦ Easy to use
- ♦ Cool and comfortable to sleep on
- ♦ Bite proof on all six sides
- ♦ Easy to install with our three sided zipper

Protect-A-Bed® **Miracle Membrane®** Technology

Protect-A-Bed's Mattress Encasements are manufactured with leading technology in bed bug bite proof material. This material is known as the Miracle Membrane®.

The Miracle Membrane® does much more than just prevent bed bugs from biting through, it also increases the sanitation of the bedding by being:

- Waterproof
- Air Vapor Porous
- An Allergen Barrier
- A Dust Mite Barrier

INTRODUCING **BUG LOCK®** Secure Seal®
PATENTED

BUG LOCK® Secure Seal®
with 3-sided zipper system and allergy flap

Finally, a bedding ENCASEMENT that's not just Bed Bug Proof but **CUSTOMER PROOF!**

The original Bed Bug Proof Encasement with Patented BugLock®

Every Mattress Needs Protection

THE TESTED AND BUG PROOF

BUG LOCK® Secure Seal®

Bug Lock® with Secure Seal® and 3-sided Zipper System

Every one of our encasements features a patented enclosure system that incorporates a sealed safety trench that is stitched around the typically vulnerable zipper clasp, as well as micro-zipper teeth for an extra tight seal.

The scientifically proven system is known as **BUG LOCK®**. This locking mechanism is a major component to Protect-A-Bed's success in providing complete protection against allergens, dust mites, and the prevention of the entry and escape of bed bugs.

The Key Features Include:

Micro-Zipper Teeth

The micro-zipper teeth used in Protect-A-Bed's encasements are specifically designed to prevent bed bugs from weaving their way through the closed zipper.

Patented Buglock® - Stitched Safety Trench

The stitched safety trench is sealed around the end clasp of the zipper which is typically vulnerable due to its inability to fully close. The safety trench is designed with raised padding underneath the end stop which creates an impassable seal. The seal prevents passage of bed bugs into or out of the encasement even if the zipper clasp pulls away from the end stop.

Secure Seal®

Secure Seal consists of a "zip tie" which attaches to the zipper as well as an added tie down point on the encasement. This means that under no condition or abuse will the zipper pull away from the end clasp. Secure Seal locks the encasement onto bedding ensuring that it is not prematurely removed or removed by non-authorized personnel.

Product Profiles

ALLERZIP® Terry MATTRESS OR BOX SPRING ENCASEMENT

AllerZip® Terry Mattress Encasement

Made with a 80% cotton 20% polyester terry sleep surface and featuring Miracle Membrane® and Bug Lock® with Secure Seal®. AllerZip Terry Mattress Encasements provide an effective barrier to prevent the migration of bed bugs into or out of the Mattress.
