

Durable Crawl Space Doors and Vent Covers— Easy to install, Ideal for Encapsulation

*Crawl Space
Vent with
Sealable Cover*

Recessed Vent Cover

Outward Mounted Vent Cover

Why Encapsulate Your Crawl Space?

Humid climates cause high humidity in the crawlspace. High humidity and moisture in the crawlspace promotes the growth of mildew and mold that can cause structural damage and unhealthy air below the sub floor that seeps into the home environment.

Encapsulating or conditioning a crawlspace creates an environment that can be controlled. Controlling the environment in the crawlspace prevents moisture and humidity from entering the crawlspace preventing mold, mildew, and unhealthy air, which can be detrimental to a home owner.

Crawl Space Door Systems, Inc. offers a variety of foundation opening covers, Outward Mounted Vent Cover (10" x 18" and 13" x 21"), Recessed Vent Cover, and our nine (9) different size Air Vents with Removable Covers to help with encapsulating or conditioning your crawlspace.

Our vent covers are available in black or white, made of durable PVC/ABS plastic (no rust or rot) with UV retardant, cover a standard 8" x 16" foundation opening. All vent covers are a surface mount installation and can be installed with either fasteners or adhesive. Great for retro-fit or new construction.
