

# Kerb®

## SC T&O

SPECIALTY HERBICIDE

Kerb® SC T&O specialty herbicide is a proven, versatile tool for golf course superintendents and lawn care, landscape and nursery professionals. Ideal for warm-season turf, it provides both preemergence and early post-emergence control of many winter annual and perennial grasses. It also provides pre-emergence control of a wide range of grasses and certain broadleaf weeds. Kerb SC T&O is available in a convenient liquid formulation, making it easier on equipment and easier to match rates to the treatment area. And unlike pouches, which may have to be cut open, the SC formulation reduces worker exposure.

On the golf course, Kerb SC T&O provides both pre-emergence and post-emergence control of *Poa annua* on warm-season grasses. It's also effective for removing perennial ryegrass from warm-season grasses during the spring to control the transition from cool-season overseed to warm-season grasses. After an application, perennial ryegrass will gradually die over a four- to six-week period.

### How Kerb SC T&O Works

Kerb SC T&O is a residual, soil-active herbicide that works primarily by preventing cell division. Its active ingredient, pronamide, acts mainly through root absorption in sensitive weed species. If no rainfall occurs within a day or so of the application, a light overhead irrigation must be made to move the chemical into the root zone.

### Weeds Controlled

Kerb SC T&O specialty herbicide provides effective pre-emergence and early post-emergence of many grassy and broadleaf weed problems, including:

#### Pre-emergence and Post-emergence

- Barley
- Bluegrass, annual and Kentucky
- Brome
- Chickweed
- Fescue, tall
- Oat, volunteer
- Orchardgrass
- Quackgrass
- Ryegrass, perennial or annual

#### Pre-emergence Control Only

- Barnyardgrass
- Crabgrass, large
- Foxtail, yellow
- Goosegrass
- Henbit
- Lambsquarters, common
- Morningglory, annual
- Mustard, wild
- Nightshade
- Smartweed, pale
- Sorrel red (from seed)

### Turf Recommendations

Kerb SC T&O is recommended for use on the following warm-season, nonresidential turfgrass species:

- Bermudagrass
- St. Augustinegrass
- Centipedegrass
- Zoysiagrass

## Landscape and Nursery Recommendations

To control winter annual and perennial grasses and certain broadleaf weeds, apply Kerb SC T&O in the fall to established trees, woody ornamentals, nursery stock of ornamentals and Christmas trees. It is not recommended for seedling trees or shrubs younger than 1 year old. It may be directly or topically applied to woody ornamentals, nursery stock or Christmas trees.

## How to Apply

Kerb® SC T&O can be applied as a broadcast spray for Poa annua control when warm-season grasses are at 50 percent or more greenup at the following rates:

- Pre-emergence or early post-emergence (Use the higher rate when longer pre-emergence residual control is desired.) — 1.25 to 2.5 pints per acre
- Post-emergence (early tillering to heading) — 2 to 2.5 pints per acre
- Post-emergence (seed forming stages) — 2.5 to 3.5 pints per acre
- Wait 90 days after application before overseeding with susceptible cool-season turfgrasses.
- For removal of perennial ryegrass, apply at a rate of 1.25 to 2.5 pints of product per broadcast acre.
- In nursery and landscape applications, Kerb SC T&O should be applied in fall before leaf drop and soil freeze at a labeled rate of 2.5 to 5 pints per acre, depending on target weed (see label).

Remember that Kerb SC T&O specialty herbicide acts through root absorption. If no rainfall occurs within a day after application, use a light overhead irrigation to move the chemical into the weed root zone.

## Key Benefits

- Convenient formulation
- Easy to match rates to the treatment area
- Provides preemergence and early post-emergence weed control
- Excellent tolerance by popular warm-season turfgrass species
- Broad-spectrum control
- Tank-mix flexibility
- Cost-effective
