

D-Solve

SODIUM & BICARBONATE MITIGATION

D-Solve Many turf stands suffer from poor irrigation water quality. High levels of sodium and bicarbonates lead to reduced infiltration rates, gas exchange, and overall turf quality. D-Solve is a proprietary blend of acids and a soil penetrating surfactant that work to dissolve bicarbonate layering and increase calcium and magnesium availability. Calcium in soil solution works to replace sodium on the soil's cation exchange system.

Increases Infiltration Rates | **High Acid Value** | **Nitrogen Free**

- Worker Safe
- Environmentally Safe
- Equipment Safe

Application Rate: 32-64 fl. oz. / Acre in 1-2 gal. / 1,000 • Apply weekly, biweekly, or monthly as soil testing warrants.
