

pH Reducer

LOWER ALKALINE SOIL AND HARD WATER

- Controls Algae
- Prevents Summer Patch
- Releases Bound Up Micronutrients in the Soil
- A Safe Chelating Agent
- Diminishes Bicarbonates in Water
- Reduces Scale & Other Residues from Irrigation Lines

pH Reducer A Citric Acid Solution

pH Reducer is designed for soil and water applications, where the pH needs to be lowered into a more acidic range. A natural and environmentally sound management tool, this organic based citric acid solution is ideal for lowering alkaline soil conditions. Yucca, a natural wetting agent, ensures quick penetration into even heavily compacted or thatched soils.

An added bonus, pH Reducer can also be used to decrease the incidence of summer patch. The pathogen that causes this disease is most active at a higher pH, during the spring (although the damage is not evident until summer). As a result, some turf managers apply acidifying fertilizers in the early spring to lower the pH of their thatch/soil interface. Citric acid is easily integrated into this application for even greater reduction of soil pH levels.

AN ORGANIC, NATURAL AND ENVIRONMENTALLY SAFE TOOL

- WSDA Certified for Organic Use
- Will Not change NPK Levels
- Tank Mix Buffer Solution
- Does Not Contain Any Impurities or Heavy Metals
