Termidor® Foam

Termiticide/Insecticide

A.I. 0.005% Fipronil
Packaged 6 x 20 oz cans

- The same great efficacy you have come to expect from **Termidor** products in a ready-to-use formulation
- Works great on termites, ants and wood boring beetles
- Dry foam that distributes the active ingredient onto surfaces within wall voids
- Expansion ratio - 30:1
- Unique formulation has thicker, stronger cell walls that last up to 6 times longer

Termidor® Dry

Termiticide

A.I. 0.5% Fipronil
Packaged 4 x 5.0 g

- Powerful precision application treatment option for both drywood and subterranean termites inside of structures as well as “off-structure”
- Patented Microllose™ matrix actually encourages termites to ingest and spread the active ingredient to the rest of the colony
- Does not add moisture to wood like foam and liquid applications

Restricted use in CT, MA, NY and PR.

Phantom® termidicide-insecticide and **Termidor** termiticide/insecticide are an unbeatable line-up of undetectable products that solve tough pest problems inside and out.

Phantom has consistently proven to provide superior termite control under almost any condition. As a nonrepellent, it’s undetectable to termites that ingest or come into contact with it and die as a result. It’s also proving highly impressive at keeping termites from coming back. Long-term field trials by the U.S. Department of Agriculture Forest Service showed no signs of reinfestation at over 98% of study sites six years after treatment.

Since **Phantom** went on the market in the United States in 2001, **Phantom** Certified Professionals have used it to treat termite-infested homes with tremendous success—often after prolonged failure and frustration with other treatments.

Phantom®

Termiticide-Insecticide

A.I. 21.45% Chlorfenapyr
Packaged 21 oz; 75 oz

- Because termites can’t detect **Phantom**, they unknowingly and repeatedly contact it and ingest it as they go about their regular routines.
- **Phantom** is approved for use in New York where environmental requirements are particularly stringent.
- It has a very low water solubility, which means it binds very tightly to soil and is less likely to leach out of treated areas.
- The active ingredient in **Phantom**, chlorfenapyr, is a pro-insecticide and has virtually no odor.

Approved for use in New York state
