

MOSQUITO MAGNET®

Mosquito Magnet® traps work by attracting and capturing mosquitoes and other biting insects that are breeding in yards. Natural mosquito repellents are only a short-term solution and mosquito zappers are ineffective outdoor mosquito control.

Mosquito Magnet® traps are the leading long-term solution scientifically proven to safely and effectively control mosquitoes.

How it works:

- Propane is converted to carbon dioxide (CO₂) mimicking human breath
- An attractant is used to enhance the lure
- Mosquitoes follow the plume of attractant and CO₂—thinking it's human prey
- Drawn in by the trap's CounterFlow™ Technology, mosquitoes are captured by the net
- Trapped mosquitoes dehydrate & die within 24 hours

Starts working immediately!
